

Spotting Procedures

degree of difficulty

1 (easiest – complete removal likely)
5 (extremely difficult to remove- limited expectation of success).

Chalk

Description

This applies to carpenter's chalk line, pool cue chalk, or children's chalk for sidewalk art. Small particles make removal more difficult.

Tools Required

- Extraction equipment
- **Gum Getter** or spotting spatula

Chemicals Required

- Bridgepoint **Filter Free**
- Bridgepoint **RedZONE**

Procedures

1. Use dry vacuum along with brushing or light agitation to remove as much chalk dust as possible.
2. Apply **Filter Free** generously to the affected area.
3. Agitate with spotting spatula to produce foam. Chalk particles will be suspended in the foam.
4. Dry extract using no water.
5. Repeat steps 2 - 4 continuing as long as progress is being made.
6. Extract and rinse thoroughly using hot water.
7. If color remains, Apply **RedZONE**, agitate to insure penetration. Apply heat using steam iron or wallpaper steamer. Check progress every 30 seconds. Stain should be gone in 2 to 3 minutes.
